

Custom Imaging Solutions

Torrey Pines Logic (TPL) builds custom image solutions for industrial and governmental needs. Extensive experience with maritized and environmentally protected systems puts TPL an innovation leader. Component toolkit includes gimbals, gyro-stabilized and software stabilized platforms, long range optics, color night vision imagers and variety of mid- and long-wave sensors.

Models range from field-usable to data center rack-mount units. Multi-spectral solutions built and successfully deployed with multiple customers. TPL-built low-light cameras perform orders of magnitude better than any competition. System operators have full control over

the imagers and can enhance day and night image clarity, color and can reduce noise substantially. Real-time controls go from hardened gamepads to sophisticated touch interfaces. When integrated with long range optic systems, performance can be pushed to provide excellent imagery at distances up to 50 km.
