

# LightSpeed™ L1

## Voice Comms Flashlight

Non-radio frequency communication is critical to many tactical situations. The L1 Free Space Optical (FSO) flashlights provide “stereophonic quality” voice communications in environments where radio communication is either restricted or unavailable.

The LightSpeed™ L1 tactical flashlights instantly add communication lines in airport settings, aircraft to aircraft, or nearly any EMCON/restricted non-RF situations. Whether in combat or on humanitarian missions world-wide, just aim the flashlight and talk! Standard batteries will last for 12+ hours of continuous communications.

L1 kits are delivered with two units and tactical headsets. Flashlights are pocketable and ready to use immediately

when headsets are connected. No radio frequency is emitted from these secure eye safe FSO devices; fully compliant with any EMI/RFI environment.

### Specifications

<b>Range</b>	Up to 1 km
