LightSpeed™ L3
Voice and Data Comms Flashlight

Non-radio frequency communication is critical to many tactical situations. The L3 Free Space Optical (FSO) tactical flashlight provides a 20 megabits/second of Ethernet data communication line (+ stereophonic sound) in environments where traditional radio communication is restricted, degraded, or unavailable.

The easy-to-use LightSpeed™ L3 tactical flashlight provides clear optical comms in airfield settings, aircraft-to-aircraft, and a number of EMCON/restricted situations. Whether in combat or on humanitarian missions world-wide, just aim the flashlight to talk and establish an Ethernet communication link! Standard batteries will last for 8+ hours of continuous communications.

The L3s are pocketable and ready to use immediately when connected to ethernet devices. No radio frequency is emitted from these secure eye safe FSO devices; fully compliant with any EMI/RFI environment.

Connectors

Specifications

Range	Up to 2.5 km
Voice, Data	Data up to 20Mbps and concurrent Voice
Dimensions	4.5" x 4.25" x 7" w/ battery handle; 4.5" x 4.25" x 2.5" w/o battery handle
Weight	1366g w/ batteries; 1182g w/o batteries
Batteries	4 x 18650 rechargeable batteries
Connectors	Ethernet RJ-45, Audio
